

precipitation normally furnishes 0.20 acre feet per acre, giving a net consumptive requirement of 1.60 acre feet per acre. The balance of 2.10 acre feet per acre reflects both application and conveyance losses that under present physical and economical conditions may be liberal but are not considered unreasonable for this area with limited storage. This allowance will vary depending upon economics and the development of the area. It is stipulated by all parties that the duty of water is fixed at 3.7 acre feet per acre of land; however, this is on an interlocutory basis and subject to any interested party petitioning the Court to show why the duty should not be increased or decreased.

6. This proposed determination is intended to cover all existing rights and pending applications initiated in the office of the State Engineer, all within the area described. The rights listed herein, which are founded upon contemplated appropriations of water by subsisting applications filed in the office of the State Engineer, are subject to inclusion in a final decree conditional upon compliance with the terms of the application upon which the respective contemplated appropriations are based and upon compliance with the provisions of the laws of the State of Utah relative thereto. At the end of the periods as hereinafter mentioned, the status of said applications shall be reported by the State Engineer to the Court for inclusion in such supplemental report and decree as the Court may deem proper.

7. A water users claim number is used to describe a fact situation, such as a point of diversion, a priority, or an interest, that can be treated as a unit. Thus a water right may be constituted by one or several water user claim numbers each of which describe the fact situation.

8. The irrigation period of use from Apr. 1 to Oct. 31 as set forth herein for the diligence rights is determined to be adequate during most years. However, the proposed determination recognized that there are years when water has been and can be beneficially used for irrigation purposes prior to April 1 and/or subsequent to October 31 and during those years the water users owning such diligence rights shall be entitled to divert water prior to April 1 and/or subsequent to October 31 only when they can beneficially use the same for irrigation purposes.
