

may be liberal, but are not considered unreasonable for this area. This allowance will vary depending upon economics and development of the area. It is recommended that the Court reserve a right to change, at some future date, this liberal allowance in the interest of full development of the area.

8. This proposed determination is intended to cover all existing rights and pending applications initiated in the office of the State Engineer, all on the stream described. The rights listed herein that are founded upon contemplated appropriations of water by pending applications which have not been certified, are subject to inclusion in a final decree conditional upon compliance with the terms of the application upon which the respective contemplated appropriations are based and upon compliance with the provisions of the laws of the State of Utah relating thereto. Those applications filed for direct diversion for irrigation purposes shall be subject to the period of use set forth in Paragraph #10. At the end of the periods as hereinafter mentioned, the status of said applications shall be reported by the State Engineer to the Court

for inclusion in such supplemental report and decree as the Court may deem proper.

9. A water user's claim number is used to describe a fact situation, such as a point of diversion, a priority, or an interest that can be treated as a unit. Thus a water right may be constituted by one or several water user claim numbers each of which described the fact situation.

10. The period of use for irrigation purposes shall be April 1 to October 31 which allows approximately one month in advance and approximately one month following the average frost-free period of each year, but the State Engineer, or his duly appointed water commissioner, should be entitled to vary this period of use when necessary to insure the most beneficial use of water; but this variance shall not establish any right as against storage or other beneficial uses either present or future.

11. The State Engineer, or his duly appointed water commissioner, may authorize temporary changes when conditions merit such changes without notice or upon such notice and upon such conditions as the State Engineer shall determine.
