

Division,

Last night I attended the open meeting at Roy High. A question that came to mind after the meeting is this? There are several small wells in our district that have the potential to have the point of diversions changed. Because there are so many and they are so small the costs associated with changing these has not been financially worth doing. Are there any funds available to help us with this process or has the division talked about ways to make this more feasible for water districts?

Thanks,

Ryan Rogers
