Dear Mr Olds,

I certify by my signature that I am a resident of New Castle or that I am a resident of the Escalante Valley and that I own underground water rights that have been granted by the State of Utah.

I understand the State Engineer has begun the process to establish a groundwater management plan for the Beryl / Enterprise area by holding public meetings and soliciting comments.

I have serious concerns with the state engineer's current proposal of safe yield presented during the August 6th public meeting which could effectively reduce water consumption in our basin by as much as 50%. It is my concern that the economic impacts of such a reduction would result in consequences that would endanger our economic viability and future.

I support the locally driven plan developed by the Escalante Valley Water Users Association, which creates stability and balance between the need to reduce water consumption and the need to protect the economic viability of the Escalante Valley area.

Dear Mr Olds,

I certify by my signature that I am a resident of New Castle or that I am a resident of the Escalante Valley and that I own underground water rights that have been granted by the State of Utah.

I understand the State Engineer has begun the process to establish a groundwater management plan for the Beryl / Enterprise area by holding public meetings and soliciting comments.

I have serious concerns with the state engineer's current proposal of safe yield presented during the August 6th public meeting which could effectively reduce water consumption in our basin by as much as 50%. It is my concern that the economic impacts of such a reduction would result in consequences that would endanger our economic viability and future.

I support the locally driven plan developed by the Escalante Valley Water Users Association, which creates stability and balance between the need to reduce water consumption and the need to protect the economic viability of the Escalante Valley area.

I have serious concerns with the State Engineer's current proposal of safe yield presented during the August 6th public meeting which could effectively reduce water consumption in our basin by as much as 50%. It is my concern that the economic impacts of such a reduction would result in consequences that would endanger our economic viability and future.

I support the locally driven plan developed by the Escalante Valley Water Users Association, which creates stability and balance between the need to reduce water consumption and the need to protect the economic viability of the Enterprise / Escalante Valley area.

Dear Mr. Olds:

I certify by my signature that I am a resident of Enterprise City or that I am a resident of the Escalante Valley and that I own underground water rights that have been granted by the State of Utah.

I understand the State Engineer has begun the process to establish a groundwater management plan for the Beryl / Enterprise area by holding public meetings and soliciting comments.

I have serious concerns with the State Engineer's current proposal of safe yield presented during the August 6th public meeting which could effectively reduce water consumption in our basin by as much as 50%. It is my concern that the economic impacts of such a reduction would result in consequences that would endanger our economic viability and future.

I support the locally driven plan developed by the Escalante Valley Water Users Association, which creates stability and balance between the need to reduce water consumption and the need to protect the economic viability of the Enterprise / Escalante Valley area.

PO Box 146300
Salt Lake City, UT. 84114-6300

Dear Mr Olds,

I certify by my signature that I am a resident of Enterprise City or that I am a resident of the Escalante Valley and that I own underground water rights that have been granted by the State of Utah.

I understand the State Engineer has begun the process to establish a groundwater management plan for the Beryl / Enterprise area by holding public meetings and soliciting comments.

I have serious concerns with the state engineer's current proposal of safe yield presented during the August 6th public meeting which could effectively reduce water consumption in our basin by as much as 50%. It is my concern that the economic impacts of such a reduction would result in consequences that would endanger our economic viability and future.

I support the locally driven plan developed by the Escalante Valley Water Users Association, which creates stability and balance between the need to reduce water consumption and the need to protect the economic viability of the Enterprise / Escalante Valley area.

I certify by my signature that I am a resident of Enterprise City or that I am a resident of the Escalante Valley and that I own underground water rights that have been granted by the State of Utah.

I understand the State Engineer has begun the process to establish a groundwater management plan for the Beryl / Enterprise area by holding public meetings and soliciting comments.

I have serious concerns with the State Engineer's current proposal of safe yield presented during the August 6th public meeting which could effectively reduce water consumption in our basin by as much as 50%. It is my concern that the economic impacts of such a reduction would result in consequences that would endanger our economic viability and future.

I support the locally driven plan developed by the Escalante Valley Water Users Association, which creates stability and balance between the need to reduce water consumption and the need to protect the economic viability of the Enterprise / Escalante Valley area.

Utah Division of Water Rights
1594 W. North Temple, Suite 200
PO Box 146300
Salt Lake City, UT. 84114-6300

Dear Mr. Olds:

I certify by my signature that I am a resident of Enterprise City or that I am a resident of the Escalante Valley and that I own underground water rights that have been granted by the State of Utah.

I understand the State Engineer has begun the process to establish a groundwater management plan for the Beryl / Enterprise area by holding public meetings and soliciting comments.

I have serious concerns with the State Engineer's current proposal of safe yield presented during the August 6th public meeting which could effectively reduce water consumption in our basin by as much as 50%. It is my concern that the economic impacts of such a reduction would result in consequences that would endanger our economic viability and future.

I support the locally driven plan developed by the Escalante Valley Water Users Association, which creates stability and balance between the need to reduce water consumption and the need to protect the economic viability of the Enterprise / Escalante Valley area.

Jerry Olds
Utah Division of Water Rights
1594 W. North Temple, Suite 200
PO Box 146300
Salt Lake City, UT. 84114-6300

Dear Mr. Olds:

I certify by my signature that I am a resident of Enterprise City or that I am a resident of the Escalante Valley and that I own underground water rights that have been granted by the State of Utah.

I understand the State Engineer has begun the process to establish a groundwater management plan for the Beryl / Enterprise area by holding public meetings and soliciting comments.

I have serious concerns with the State Engineer's current proposal of safe yield presented during the August 6th public meeting which could effectively reduce water consumption in our basin by as much as 50%. It is my concern that the economic impacts of such a reduction would result in consequences that would endanger our economic viability and future.

I support the locally driven plan developed by the Escalante Valley Water Users Association, which creates stability and balance between the need to reduce water consumption and the need to protect the economic viability of the Enterprise / Escalante Valley area.

Salt Lake City, UT. 84114-6300

Dear Mr. Olds:

I certify by my signature that I am a resident of Enterprise City or that I am a resident of the Escalante Valley and that I own underground water rights that have been granted by the State of Utah.

I understand the State Engineer has begun the process to establish a groundwater management plan for the Beryl / Enterprise area by holding public meetings and soliciting comments.

I have serious concerns with the State Engineer's current proposal of safe yield presented during the August 6th public meeting which could effectively reduce water consumption in our basin by as much as 50%. It is my concern that the economic impacts of such a reduction would result in consequences that would endanger our economic viability and future.

I support the locally driven plan developed by the Escalante Valley Water Users Association, which creates stability and balance between the need to reduce water consumption and the need to protect the economic viability of the Enterprise / Escalante Valley area.

I have serious concerns with the State Engineer's current proposal of safe yield presented during the August 6th public meeting which could effectively reduce water consumption in our basin by as much as 50%. It is my concern that the economic impacts of such a reduction would result in consequences that would endanger our economic viability and future.

I support the locally driven plan developed by the Escalante Valley Water Users Association, which creates stability and balance between the need to reduce water consumption and the need to protect the economic viability of the Enterprise / Escalante Valley area.

Dear Mr. Olds:

I certify by my signature that I am a resident of Enterprise City or that I am a resident of the Escalante Valley and that I own underground water rights that have been granted by the State of Utah.

I understand the State Engineer has begun the process to establish a groundwater management plan for the Beryl / Enterprise area by holding public meetings and soliciting comments.

I have serious concerns with the State Engineer's current proposal of safe yield presented during the August 6th public meeting which could effectively reduce water consumption in our basin by as much as 50%. It is my concern that the economic impacts of such a reduction would result in consequences that would endanger our economic viability and future.

I support the locally driven plan developed by the Escalante Valley Water Users Association, which creates stability and balance between the need to reduce water consumption and the need to protect the economic viability of the Enterprise / Escalante Valley area.

Salt Lake City, UT. 84114-6300

Dear Mr. Olds:

I certify by my signature that I am a resident of Enterprise City or that I am a resident of the Escalante Valley and that I own underground water rights that have been granted by the State of Utah.

I understand the State Engineer has begun the process to establish a groundwater management plan for the Beryl / Enterprise area by holding public meetings and soliciting comments.

I have serious concerns with the State Engineer's current proposal of safe yield presented during the August 6th public meeting which could effectively reduce water consumption in our basin by as much as 50%. It is my concern that the economic impacts of such a reduction would result in consequences that would endanger our economic viability and future.

I support the locally driven plan developed by the Escalante Valley Water Users Association, which creates stability and balance between the need to reduce water consumption and the need to protect the economic viability of the Enterprise / Escalante Valley area.

I have serious concerns with the State Engineer's current proposal of safe yield presented during the August 6th public meeting which could effectively reduce water consumption in our basin by as much as 50%. It is my concern that the economic impacts of such a reduction would result in consequences that would endanger our economic viability and future.

I support the locally driven plan developed by the Escalante Valley Water Users Association, which creates stability and balance between the need to reduce water consumption and the need to protect the economic viability of the Enterprise / Escalante Valley area.

Dear Mr. Olds:

I certify by my signature that I am a resident of Enterprise City or that I am a resident of the Escalante Valley and that I own underground water rights that have been granted by the State of Utah.

I understand the State Engineer has begun the process to establish a groundwater management plan for the Beryl / Enterprise area by holding public meetings and soliciting comments.

I have serious concerns with the State Engineer's current proposal of safe yield presented during the August 6th public meeting which could effectively reduce water consumption in our basin by as much as 50%. It is my concern that the economic impacts of such a reduction would result in consequences that would endanger our economic viability and future.

I support the locally driven plan developed by the Escalante Valley Water Users Association, which creates stability and balance between the need to reduce water consumption and the need to protect the economic viability of the Enterprise / Escalante Valley area.
