Subj.: Tooele County water policy

There are many variables and little sound data on just what happens under Tooele Valley, so it is hard to know what policy is best. But this we can know for sure. It is not fair, ethical or morally right to inflict a new policy on people who submitted their application for change 18 months ago, and whose decision to buy these water rights was based on your policy that was current at the time, and also discussions with your employees. The new policy should only apply to any applications submitted after the policy is published and people are properly notified.
